

ALPHA T5

Fully automatic folding, sorting
and stacking of towels

Fully automatic folding, sorting and stacking of towels

The ALPHA T5 can be specified for folding, sorting and stacking the complete range of dry goods and meets all requirements of today's laundry automation.

Thanks to the inclined feeding table, the feeding height fits all operators, ensuring an optimum ergonomic feeding position and thereby a continuous high production.

The dimension of the towel is automatically measured in order to automatically assign the correct folding pattern to each individual linen size.

The lateral fold is performed by mechanical folding blades, guaranteeing fast folding and a unique stretching effect to the linen and is a proven advantage especially for heavily used towels.

Perfect and flexible folding

The cross fold section can perform 1 or 2 cross folds as a half fold, or one French fold. The cross fold is performed by reversing conveyor and air blast. The cross fold section is flexible and adapts automatically to the thickness of the item. The flexibility of the cross-fold section prevents items from jamming between the rollers, allowing a piece to be fast and easily removed when opening the hinged safety cover. The stacking section provides 1 or 3 stackers depending on choice of model.

Installation

JENSEN is pleased to assist you in planning your laundry providing excellent consulting, layouts and technical data. Authorized JENSEN distributors or JENSEN engineers should carry out the installation to ensure the correct performance.

Service

In addition JENSEN provides an extraordinary after sales service through a worldwide network of highly qualified Sales and Service Centers and distributors, all with their own maintenance and spare parts services.

Automatic sorting and stacking

As a standard feature, the ALPHA T5 is supplied with 3 photocells positioned on the feeding table. The photocells are positioned in a vertical position, enabling automatic sorting and stacking onto pre-determined stackers according to item width or feeding position.

Item sizes (W×L):

Maximum 1200 × 2000 mm.

Minimum 400 × 400 mm.
