M 501 - 502

The M 501 tensioning form finisher has been designed to fulfil demands of a Wet Cleaning pressing system that requires vertical tensioning for perfect seam finishing and fabric "revitalising". Suitable for jackets, coats, raincoats, lumber jackets, leather garments, dresses and also many other speciality applications of any fabric and size. It features a special tensioning system for the garment being processed and the powerful hot air flow provides a high class finish. Automatic positioning of the dummy is accomplished using a photocell. A powerful and flexible microprocessor allows cycles to be programmed and saved.

It is supplied ready for connection to an external steam supply. Using the M 501 for dry cleaned garments, a very high standard of finish will be achieved.

Any final touching-up (if at all) is restricted to very minor details. Using the M 501, you will see improved hourly output and significantly, no specialised labour is required to produce excellent results

M 501

With microprocessor cycle control, up to 10 programs storage capacity. Available with either a fixed dummy or with a 270° rotating dummy. Available options (upon request).

M 502

With PLC system as standard allowing up to 10 programs to be customised and saved, a 270° rotating dummy; lateral and rear pneumatic clamps for vents.

Available extras upon request:

- GFV steam iron assembly complete with ALL STEAM iron for final touch-up.
